## DETAILED ACTION

1. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See Miller v. Eagle Mfg. Co., 151 U.S. 186 (1894); In re Ockert, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer <u>cannot</u> overcome a double patenting rejection based upon 35 U.S.C. 101.

- 2. Claims 1-37 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-37 of copending Application No. 10/762,202. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented.
- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the

Application/Control Number: 10/762,202

Art Unit: 1772

art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

4. Claims 1-4, 6-14, 26, 30-37 rejected under 35 U.S.C. 103(a) as being unpatentable over Hirschberger (U.S. 4,740,415) in view of German et al. (U.S. 2004/0072005 A1).

Hirschberger teaches a container carrier made of low density polyethylene mixed with an amount of linear low density polyethylene that increases the strength of the carrier without changing the necking and snap qualities needed in the carrier (abstract, col. 4, lines 20-35). German et al. teaches using a mixture of LLDPE and VLDPE, the VLDPE having a density below .91 grams per centimeter squared. The blend has better strength than LLDPE without the VLDPE (abstract, 0021, 0023, 0190). The instant invention claims a container carrier formed of LDPE blended with VLDPE. It would have been obvious to one of ordinary skill in the art to have used a mixture of LLDPE and VLDPE in place of LLDPE alone in the carrier of Hirschberger in order to obtain better strength in the material of the carrier because of the teachings of German et al.

5. Claims 5, 15-25 and 27-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hirschberger (U.S.

Art Unit: 1772

4,740,415) in view of German et al. (U.S. 2004/0072005 A1) as applied to claims 1-4, 6-14, 26, 30-37 above, and further in view of Balduff et al. (U.S. 4,709,808).

Balduff teaches using a carbon monoxide copolymer in order to allow environmental degradability of the containers and other disposable objects. The instant invention claims the use of a carbon monoxide polyethylene copolymer in a container carrier. It would have been obvious to one of ordinary skill in the art to have used a carbon monoxide copolymer with the polyethylene of Hirschberger as modified above in order to allow environmental degradability because of the teachings of Balduff.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Watkins III whose telephone number is 571-272-1503. The examiner works an increased flex time schedule, but can normally be reached Monday through Friday, 11:30 A.M. through 8:00 P.M. Eastern Time. The examiner returns all calls within one business day unless an extended absence is noted on his voice mail greeting.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on 571-272-1498. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR of Public PAIR. Status information for unpublished applications is available through
